BONDERITE

Henkel Ready-to-Use Surface Treatments for the Aerospace Industry

BONDERITE® ready-to-use conversion coatings and surface treatments range from pen-sized applicators for touch-ups to bulk packaging for full-scale processing. Choose BONDERITE brand products, formerly known as ALODINE and TURCO, and be ready for any aerospace manufacturing or maintenance need.

Benefits include:

- Available in multiple packaging configurations for optimal surface application
- Convenient ready-to-use form
- Improved process efficiency
- Reduced waste and operator error
- REACH compliant and Mil-Spec approved products available
- Prevent corrosion
- Improve adhesion

Description	Environmentally- friendly
-N-Prep® Coating is a tri-chrome dry-in-place conversion coating designed for use on aluminum and its r this product provides an easy and safer method of repairing bare areas of aluminum surfaces. Its proper nical solutions and decreases wastewater, such as rinse water generated from a conversion coating process.	
n-N-Prep® Coating is designed to save labor, material, and time when applying a dry-in-place hex-chrome plications. Its proper use also reduces worker contact to chromated solutions and decreases wastewater, a chromating process.	
tment is a chromium free conversion coating specifically formulated for treating aluminum and its alloys. y-to-use material. The process provides an excellent base for organic finishes.	
s a ready-to-use liquid product which produces a chromate conversion coating on aluminum and its alloys. ection for unpainted aluminum and bonds paint well.	
solgel coating replacement specifi cally formulated for increasing adhesion to aluminum and titanium alloys. ush, and wipe on applications. The coating produced provides an excellent base for organic finishes and nding. It should not be rinsed after application.	
RO contains products formulated for treating magnesium alloys to produce a chromate conversion coating e VI. The application method conforms to requirements in NAVAIR 01-1A-509 and is meant primarily for esses of magnesium alloys, and also is an adhesion promoter.	
D is a complex trivalent chromium conversion coating formulated for treating aluminum and its alloys, magnesium, titanium and zinc surfaces. This product is formulated as a ready-to-use material for applications. It provides corrosion resistance and also serves as an excellent base for organic finishes	
O contains the conversion coating BONDERITE M-CR 1201 AERO and the deoxidizer BONDERITE C-IC 605 ed for treating aluminum. This kit contains sufficient chemicals for cleaning and coating approximately 100 under normal conditions.	
ERO is a blue, viscous, alkaline, water base, concentrated compound formulated to effectively cling to rior and interior surfaces. It is ideally suited for use on all jets, especially in baggage bins, flap and wheel verhaul.	
from mechanical removal methods.	
llow, viscous paint remover developed to remove epoxy, polyurethane and similar coatings from metal t clings to vertical and overhead surfaces and forms a surface film that helps retard evaporation and extend ould not be used on materials that are affected by chlorinated hydrocarbons.	Ì
s an amber, diphase liquid developed to remove epoxy, polyurethane and other catalyzed finishes from does not contain free acidic or alkaline constituents and is approved for use on high strength steels. It t are affected by chlorinated hydrocarbons.	
vironmentally advantaged paint remover is low-odor, thixotropic, developed for effective stripping of poxy primers, polyurethanes and similar catalyzed paints. It offers a significant advance in work place safety. ide, chlorinated solvents, phenols, chromates, ammonia or amines.	
onmentally advantaged paint remover is low odor, thixotropic, activated by hydrogen peroxide. It was such resistant finishes as epoxies, epoxy primers, polyurethanes, and similar catalyzed aircraft paints. It stripper technology. It complies fully with NESHAP. It meets the corrosivity requirements of TT-R 2918A. It is esium.	
viscous white emulsion that does not contain any of the hazardous or highly toxic components of ree of aromatic hydrocarbons, chlorinated solvents, phenol and chromates. It is particularly effective in painted composites.
